

FEED ORDERS:WHAT'S YOUR PROCESS

Get the RIGHT Feed, At the RIGHT Time, VERIFIED

With rising input costs and narrower profit/loss margins, it's more important than ever to monitor feed usage. There is a system designed to do just that. The Feed Allocation System (F.A.S) automates the time-consuming, sometimes complicated task of feed ordering. This feed ordering system allows producers to have the **right feed** delivered at the **right time, verified**.

Through an automated feed ordering process, producers determine the amount of feed required in each order, which bin it is to be loaded into, and sends this order with the necessary information to the appropriate mill. With F.A.S producers gain the ability of ordering feed for multiple budgets from several different mills at the same time, gaining management efficiency and potential cost savings.

The F.A.S process also allows producers to add an element of traceability and verification to their ordering process. Multiple budgets can be placed in the program as well as diets. The program provides users with an adjustable feed management system and suggests ration adjustments based on their fluctuating inventory. This reduces feed cost and maintains the integrity of the original budget.

Feed costs are the number one expense of every swine operation besides the pig itself, so producers are searching for low cost easy to implement effective feed management systems. Producers are constantly looking for every possible opportunity to in real time, effectively control costs without sacrificing performance. F.A.S provides the ability to make budget decisions on the fly, without the risk compromising the budget, both the feed budget but more importantly the financial budget.

Have you ever been on an eight-phase feeding program and when you were on phase six you are selling pigs? This will not occur if you are able to adjust your budget on a daily or weekly schedule, accounting for death loss, sickness or other outside factors. For example, if you have 20% death loss and you aren't adjusting your feed, you end up feeding more expensive rations meant for younger pigs to older pigs. F.A.S emphasizes the importance of reporting and recording death loss. For people who aren't recording this kind of information, there is the potential for significant savings per pig, with a significant ROI.

Automate the most complicated time-consuming task in the livestock industry today.

From an auditing standard every data entry record is permanent, which is really important for data analysis; there can be no fudging of numbers. Input is input. Without a tamper proof process, answers to questions like "are your employees ordering the right feed, and are they ordering it in a timely manner can never truly be evaluated. With F.A.S there is a verifiable record of each of these activities.

The side benefit of a precise data entry program is the ability to create reports which reflect daily production activities today vs. what the activity was from two turns ago. They can track daily if needed the farm, groups of pigs, health status and flow. There are numerous reports available which are quickly and easily accessed as needed.

The Feed Allocation System records all the cost associated with your hog production system. All orders can be traced back to a specific group and to specific vendor invoices for reconciliation. Actual prices and purchasing activities can be reviewed, creating the opportunity to search for any and all potential cost saving opportunities.

The F.A.S program can be utilized for any type of system. It's detailed enough for integrators and flexible enough for individual producers.

Final thoughts to again consider: Is your feed on time, on budget and traceable? The Feed Allocation System automates the most complicated time-consuming task in the livestock industry today. With this web-based system, delivering the right feed at the right time, verifiable becomes easy and routine.

If now you have a cloud of doubt over your current feed ordering process, and you would like to at least look at an alternative to your current process. Give us a call, we would be more than happy to set you up with a 30 day absolutely free trial of the F.A.S program. You could be up and ordering feed the same day and running reports tomorrow.
