

product innovation & ingenuity

Stingy Water Nipple Valves

Years of research in animal health and drinking habits have preceded the development of STINGY Hog Watering Equipment. STINGY is the original inventor of nipple watering as it is known in the industry today.

Stingy Water Nipple Valve with Silicon Insert

Gro Master helped design and patent the special silicone insert that is used in all in Crystal Spring Feeders.

This unique silicon insert, developed and patented by Gro Master, Inc., replaces the standard spring which reduces nipple problems.

Repairing or replacing nipples that are leaking in all areas of the swine barn is a good investment in time, resources, and money. Water should be free of all foreign particles: sand, mud, rust, algae, etc. which can clog orifices and create excessive wear on O-rings.

- Designed for vertical mounting in Crystal Spring Wet/Dry two sided wet feeders.
- Non-magnetic 18-8 stainless steel body.
- Hex-nut fitting with 1/2" NPT thread for easy installation.
- Heavy-duty stainless steel with silicon insert for long life and trouble-free operation.
- Oversize actuator stem minimizes feed build-up between valve body and actuator.

Nipple Nozzles

The original patented hog watering nipples. Water gently flows to match the animal's needs and swallowing capacities.

- Works on either gravity or pressure systems (3-50 psi).
- Patented silicon insert assures positive shut-off over wide range of operating pressures.
- Hex-nut fitting permits easy installation.
- Manufactured from stainless steel and available in three basic sizes

The success of the Crystal Spring Feeding System relies not only on the workmanship of the high quality steel and innovative design, but even the smallest of details including the water nipples.

The Stingy water nipple with the patented silicon insert is also available in the bite valve nipple and the nipples designed for water cups.
